

Lookout[®] Car Seat Instructions

Place the Lookout on either the front or rear seat of your vehicle. It will be high enough so that when your pet is inside they will be able to look out the window and see what's happening outside. This keeps them interested in their ride and they won't want to climb on your shoulders or in your lap, making for a safer ride. Our customers also tell us that motion sickness has been reduced for many pets.

Bring the car's shoulder harness and bottom belt down through the open slot on the back of the Lookout seat and snap it into the seat belt receptacle. This fastens the Lookout to the car.

For safety during sudden stops your pet should have a harness and be strapped into the Lookout. A small strap is supplied with the Lookout that attaches to your harness's D ring and goes around the bottom seat belt that holds the Lookout to the car seat. **DO NOT ATTACH THE STRAP TO THE PET'S COLLAR.** Adjust the harness so that your pet has movement but cannot get out of the Lookout.

In the beginning your pet may move side to side. You can always put a safety pin through the supplied strap and the seat belt to keep the strap centered in the seat. It can be removed as your pet becomes accustomed to the Lookout (safety pin is not supplied).

Your pet will quickly realize they can see out or sleep comfortably keeping both you and your pet safe during sudden stops.

Use the Lookout at home or in Hotels as your pet's bed and then move it into the car for travel. Your pet will look forward to sleeping in it at night.

The cover is machine washable in warm water, no bleach. Machine dry, removing promptly.

The manufacturer warrants this product to be free of manufacturing defects for a period of 90 days and will replace or repair it in the rare case it is necessary.
